

A Success Story Begins

AquaX Water Now Available at Clovers in Midwest

Columbia, Missouri, January 30, 2008 – First, let it be said that your editors are marketing professionals; we're advertising and public relations type people. Creatively we know what we're doing and are pretty good at passing on information in an attractive, discernible form. But when it comes to nationwide product distribution, we're just learning.

We now realize the difficulty in getting a superior product from the drawing board to the shelves. Even though we feel AquaX Water is a product like no other – and one that can benefit us all in many ways, we are realizing quickly how tough it is to get this done.

After many setbacks and frustrations, AquaX Water is beginning to move. And now, about 18 months since it was introduced to us at Expo East in Baltimore, AquaX on the shelves of at least one Midwestern City.

And that city happens to be the one in which your editors reside.

The Clovers stores, located in this home of the University of Missouri, with a population of 100,000 or so, and a market range three times that number, received its first order of AquaX Water this week.

The owners of this popular and successful natural and organic products operation were introduced to the product last Spring, at Expo West in Anaheim – and fell in love with it as did your editors a few months before.

Clovers isn't Whole Foods – but they're savvy merchandisers, and part of the communities they serve. While small in number of stores, the quality of their products and their unmatched service can go up against any of the biggies anytime.

Once inside a Clovers store, you can purchase AquaX Water in a 12-pack of 24 ounce bottles or individually. Wrapped inside an attractive label, AquaX comes direct from a Sedona, Arizona aquifer, and is unique. Nothing has been added or taken away from this water; its unique quality is derived from the water passing through a patented molecular **enhancement process** – one that affects the body in beneficial ways.

We've said in earlier articles that **"Not all Waters are Alike"** ... which means that many products on the market today are just enhanced tap water, having gone through reverse osmosis or includes additives that mask what's missing.

As human beings, we function best when our pH levels are as near to normal (or as they were for most of us at birth, if we came into this world with no problems.) Since we entered the fray, most of what we've been drinking has had little impact on nourishing our bodies and hasn't reached our cells, putting our body's pH balance out of whack. This balance is critical to proper hydration.

The applied technology in AquaX Water helps take care of this shortfall, by nurturing and hydrating our bodies at the cellular level.

So there you have it – an all-natural, great-tasting, high-energy, oxygen-available, micro-structured bottled water product, with nothing foreign — no minerals, substances, electromagnetic forces or ionization added. Just for you.

Most importantly, AquaX is competitively priced.

There are no bells and no whistles – just great, 100% natural artesian, high-energy water, enhanced by the patented process described, that returns it to its pristine level and pure taste.

Tested and proven in respectable laboratories, AquaX is supported by mainstream scientific principles.

Still need convincing? Stop by either of the Clovers stores in Columbia, Missouri and purchase one 12-pack of AquaX Water. Drink one bottle a day for a week, and let us know how you feel.

You know where to find us.
